

Project Management

Services

Experienced and professional project managers coordinate all aspects of your study.

We work closely with you to align project objectives, define responsibilities, and develop comprehensive project operating and communication plans at an early stage. The project manager directs all activities to ensure optimal project implementation, meet timelines and milestones, maintain excellent quality, and provide requisite training.

Members from key departments with requisite expertise are assigned to each project team. These project teams provide the fundamental disciplines that are essential to the success of your project. Our enthusiastic, dedicated, and flexible project teams provide excellent strategy, clinical development, project management, customer service, and communications at all levels. REGISTRAT-MAPI project managers work closely with the project team to maintain timely and thorough communications, anticipate project risks, develop contingency plans, and keep your project on time within budget and on target for successful completion.

Services

- Define project timelines, scope and objectives with internal and Client project teams
- Develop project risk mitigation strategies
- Define critical path items during study start-up
